

FLUSH BOLT on passive door leaf

- The flush bolt is a semi-automatic set consisting of closing mechanism fitted with lever (4), steel rods (3, 5), semi-automatic latch (2) and floor sleeve (6).
- The lever and foreplate of mechanism are made of stainless steel, the mechanism is made of zinc coated steel.
- The passive leaf is locked automatically by steel rods entering up into top of door frame and down in the floor (into floor sleeve).
- It is unlocked by manual lifting of the lever, effected by withdrawal of rods into the mechanism.
